☐ 1. Document ID: US 5601889 A
L39: Entry 1 of 3

File: USPT

Feb 11, 1997

DOCUMENT-IDENTIFIER: US 5601889 A
TITLE: Radio frequency weldable polymer articles

US PATENT NO. (1):
5601889

Detailed Description Text (43):

In order to promote the grafting of the carboxylic acid reagent to the hydrogenated block copolymer, free radical initiators are utilized, and these initiators usually are either peroxides of various organic compounds. The amount of initiator utilized generally from about 0.01% to about 5% by weight based on the combined weight of the combined copolymer and the carboxylic acid reagent. The amount of carboxylic acid reagent grafted onto the block copolymers can be measured by determining the total acid number of the product. The grafting reaction can be carried out by melt or solution mixing of the block copolymer and the carboxylic acid reagent in the presence of the free radical initiator.

☐ 2. Document ID: US 5457157 A
L39: Entry 2 of 3

File: USPT

Oct 10, 1995

DOCUMENT-IDENTIFIER: US 5457157 A
TITLE: Transparent, impact-resistant molding materials

US PATENT NO. (1):
5457157

Brief Summary Text (65):

Partially imidated polymers which have a weight average molecular weight (M.sub.w) of from 60,000 to 300,000, preferably from 100,000 to 200,000, g/mol, measured in dimethylformamide by light scattering, have proven particularly advantageous. Particularly preferred components C) are those having an acid number of not more than 0.4, in particular from 0.01 to 0.2, meq/g,

Detailed Description Text (7):

C.sub.1 : Copolymer of 87 parts by weight of I (R.sup.1 .dbd.R.sup.2 .dbd.CH.sub.3) and 13 parts by weight of MMA; viscosity number =70 (measured in dimethylformamide (DMF) as a 0.26% strength by weight solution), acid number =0.03 meq/g (n.sup.25.sub.D =1.540)

Detailed Description Text (8):

8/27/02 4:53 PM

C.sub.2 : Copolymer of 74 parts by weight of I (R.sup.1 .dbd.R.sup.2 .dbd.CH.sub.3) and 26 parts by weight MMA; viscosity number =82 (measured in DMF as a 0.26% strength by weight solution), acid number =0.02 meq/g (n.sup.25.sub.D =1.530)

CLAIMS:

3. A transparent, impact-resistant molding material as claimed in claim 1, wherein component C) has an acid number of not more than 0.4 meq/g.

☐ 3. Document ID: US 5346945 A
L39: Entry 3 of 3

File: USPT

Sep 13, 1994

DOCUMENT-IDENTIFIER: US 5346945 A
TITLE: Glass fiber-reinforced styrene copolymers

US PATENT NO. (1):
5346945

Detailed Description Text (16):
with the proviso that the acid number S of the copolymer D is at least 0.5 meq/g.

Detailed Description Text (37):
According to the invention, the copolymers D which are suitable have a relatively high acid number S, namely at least 0.5 meq/g, preferably at least 0.6 meq/g.

Detailed Description Text (38):
This acid number is determined in a manner known per se by determining the lye-titratable acid equivalents in a solution of the polymer.

Detailed Description Text (40):
The acid number is then calculated as the content of acid in equivalents per kilogram of imidizable polymer.

Detailed Description Text (63):
Acid number=0.94 meq/g

Detailed Description Text (67):
Acid number =0.67 meq/g

Detailed Description Text (71):
Acid number =0.1 meq/g

Detailed Description Text (75):
Acid number=0.02 meq/g

CLAIMS:

1. A thermoplastic molding material comprising, based on the sum of A, B, C and D,

A: 30 to 95% by weight of a copolymer A comprising, in each case, based on A

a.sub.1 : 50 to 95% by weight of styrene, .alpha.-methylstyrene, a nuclear-substituted styrene derivative or mixtures of these monomers (a.sub.1) and

a.sub.2 : 5 to 50% by weight of acrylonitrile (a.sub.2)

B: up to 60% by weight of a graft copolymer B

8/27/02 4:53 PM

b.sub.1 : prepared either by emulsion polymerization of, based on B, 15 to 85% by weight of a monomer mixture based either on

b.sub.11 : styrene-acrylonitrile in the ratio 9:1 to 4:6, or

b.sub.12 : styrene-acrylonitrile-methyl methacrylate in the ratio 19:1:0 to 8:6:6 on 15 to 85% by weight of a latex, obtained as an emulsion, of an elastomer based on butadiene or acrylic ester as grafting base; or by

b.sub.2 : solution polymerization of, based on B, 15 to 85% by weight of a monomer mixture based on

b.sub.21 : styrene-acrylonitrile in the ratio 9:1 to 4:6 or

b.sub.22 : styrene-acrylonitrile-methyl methacrylate in the ratio 19:1:1 to 8:6:6 on 15 to 85% by weight of an elastomer, prepared in solution, based on butadiene or an acrylic ester or an EPDM elastomer as grafting base;

C: 1 to 40% by weight of a reinforcing agent C based on an inorganic glass, and also

D: 0.1 to 10% by weight of a copolymer D of, based on B,

d.sub.1 : 10 to 90% by weight of units of the formula I ##STR4## in which R.sup.1 and R.sup.2 are hydrogen or methyl and R.sup.3 is hydrogen, C.sub.1 -C.sub.8 alkyl, C.sub.5 -C.sub.12 2-cycloalkyl or C.sub.6 -C.sub.16 aryl or C.sub.6 -C.sub.16 aralkyl, and

d.sub.2 : 10 to 90% by weight of units derived from a copolymerizable monomer selected from styrene, .alpha.-methylstyrene, (meth) acrylonitrile or (meth)acrylic acid esters,

with the proviso that the acid number S of the copolymer D is at least 0.5 meq/g..
